(West Germany) 1959, Apr, p. 85-92.

DESCRIPTORS: Minerals, *Dolomite, *Bitumens,
*Limestone, *Ore (Metal sources), Deposits, Salinity.

Only the recognition, that, under the influence of brine,
a part of the organic substance of the dolomitized
limestone is saved from destruction and changed into
bitumen which goes into reaction with the components of
the limestone, brine and ore solutions, explains the
causal relationship between dolomitization and ore
formation as parts of a complex process. (Author)
